Wheeler writes that gravity "is not a foreign and physical force transmitted through space." Rather, and following Einstein, gravity is the product of "curved spacetime geometry" that "grasps mass, telling it how to move" so that mass follows the contours of space.

gravity. The more massive (heavier) an object is, the greater its pull of gravity. Thus, an apple would fall to Earth. His theory of gravity ruled unchallenged until 1915 when Einstein's general theory of relativity appeared. Instead of regarding gravity as a force, Einstein looked at it as a distortion of space itself.

gravity on Earth, while Johannes Kepler worked out the laws of planetary motion around the Sun. These insights were incorporated by Isaac Newton in his magnificent system of mechanics, the science of force and motion. It was Newton who recognized that gravity is a universal force by which every mass attracts every other mass, everywhere.

A Journey into Gravity and Spacetime. According to General Relativity: - gravity is spacetime curvature, and - spacetime curvature has energy! Thus spacetime curvature causes spacetime curvature. The spacetime curvature at the surface of the Sun causes spacetime curvature just a little bit further
