Clinical Microbiology and Infection | Vol 22, Issue 3

The diagnosis of bacterial diseases in clinical microbiology has relied on phenotypic identification, based on the bacterial repertoire known to be associated with humans. This mode of identification, which is, in fact, recognition of previously described microorganisms, does not allow for the identification of new bacteria.

medical microbiology & infectious diseases profile Microbiology and infectious diseases focuses on the diagnosis and treatment of infectious diseases; thus, it is concerned with human illness due to micro-organisms.

MEDICAL MICROBIOLOGY & INFECTIOUS DISEASES PROFILE - CMA

Summary: Following their discovery in the early 1970s, classical human leukocyte antigen (HLA) loci have been the prototypical candidates for genetic susceptibility to infectious disease. Indeed, the original hypothesis for the extreme variability observed at HLA loci (H-2 in mice) was the major selective pressure from infectious diseases.
