The control precision or control quality achievable in the control loop is very dependent on how well the controller is matched to the particular controlled system.

Fundamentals of Control Engineering - ABB Ltd

It is the function of the control system to recognize the disturbed state and correct it by the appropriate means. In a similar way as in nature and economics, many variables must be controlled in technology so that equipment and systems serve their intended pur-

CONTROL SYSTEM DESIGN 19.5 If $y(t)$ is the displacement from the resting position and $u(t)$ is the force applied, it can be shown using Newton's law that the motion is described by the following linear, ordinary differential equation with constant coefficients:

A control system is a system, which provides the desired response by controlling the output. The following figure shows the simple block diagram of a control system. Here, the control system is represented by a single block.
