The main reason for this is simple. Time-to-market competitive ... writing secure code. Therefore, many of these applications have a myriad ...

An Innovative Way to do Security Code Reviews

Code access security is a mechanism that grants/denies access to resources within a method call. For example, code written by a person may be allowed to write to the disk while code from another one may be forbidden from accessing the disk. This control can be enforced even if the code written by both of them is used within a single application

Adobe Acrobat Standard DC: PDF writer

Writing secure code is a big deal. There are a lot of viruses in the world, and a lot of them rely on exploits in poorly coded programs. Sometimes the solution is just to use a safer language -- Java, for instance -- that typically runs code in a protected environment (for instance, the Java Virtual Machine).
